

# CSCE 771: Computer Processing of Natural Language

## Lecture 23: Conversation Agents

---

PROF. BIPLAV SRIVASTAVA, AI INSTITUTE

10<sup>TH</sup> NOVEMBER, 2022

***Carolinian Creed: “I will practice personal and academic integrity.”***

# Organization of Lecture 23

---

- Opening Segment
  - Announcements

- Main Lecture

- Concluding Segment
  - About Next Lecture – Lecture 24

## Main Section

- Conversation Agents
  - Rule based methods
  - (Deep) learning based methods
- Applications
- Ethical Issues

# Recent Classes

---

Nov 1 (Tu)	NLP Task: Sentiment
Nov 3 (Th)	NLP Task: Summarization
Nov 8 (Tu)	
Nov 10 (Th)	Conversation Agents
Nov 15 (Tu)	Ethical Concerns with NLP, Trusted AI and Societal Impact
Nov 17 (Th)	Working with LLMs for NLP Tasks - programming, Quiz
Nov 22 (Tu)	Paper presentations
Thanksgiving Holiday	
Nov 29 (Tu)	Project presentations
Dec 1 (Th)	Project presentations
Dec 8 (Tu)	Quiz

## Review of Lecture 22

- Summary generation
- Methods
  - Extractive - traceable to original content
  - Abstractive – non traceable to original content
  - Compressive – remove content but not information
- Applications

# Announcements

---

# Reference: Project Rubric

---

- **Project results – 60%**
  - Working system ? – 30%
  - Evaluation with results superior to baseline? – 20%
  - Considered related work? – 10%
- **Project efforts – 40%**
  - Project report – 20%
  - Project presentation (updates, final) – 20%
- **Bonus**
  - Challenge level of problem – 10%
  - Instructor discretion – 10%
- **Penalty**
  - Lack of timeliness as per announced policy (right) - up to 60%

## Milestones

- Penalty: **not** ready by Sep 15, 2022 **[-20%]**
- Project report **not** ready by Nov 10, 2022 **[-20%]**
- Project presentations **not** ready by Nov 15, 2022 **[-10%]**

Project report DUE today!

# Deadlines for Project Reports and Presentations

---

- Since the deadlines were posted since the beginning of the semester, we will not move them. However, submissions made until respective deadline can be updated till Nov 20.
- For Reports:
  - Prepare an initial version of the report by deadline (Nov 10, 2022), put in your GitHub, send me a note. It should be complete in terms of all sections and initial content.
  - You can update and post new copies until Nov 20. If updating, make sure to not overwrite the initial versions. If I do not see the initial version, I will have to penalize for missed deadline.
- For Presentations:
  - Prepare an initial version of the report by deadline (Nov 15, 2022), put in your GitHub, send me a note. It should be complete in terms of all sections and initial content.
  - You can update and post new copies until Nov 20. If updating, make sure to not overwrite the initial versions. If I do not see the initial version, I will have to penalize for missed deadline.

# Project Report Guidelines

---

- Use template of ACM Computing Surveys – Latex or Word - <https://www.acm.org/publications/authors/submissions>
- Consider your report as a paper. Sections to have will be similar
  - **Abstract**: 1-line each on what, how, result // Optional
  - **Introduction**: motivation for the work // Optional
  - **Problem** // Clearly state input and output
  - **Related Work** // What are closely related work?
  - **Approach** // How does your system work?
  - **Evaluation** // How is the result better than a baseline? What better could have been done ?
  - **Discussion** // About results, what more could be done, anything else interesting
  - **Conclusion** // Optional
  - **References**

# Project Presentation Template (2 mins)

---

- Project Name
- Problem
- Approach
- Result
- Comment:
  - Challenges faced
  - Need help

- Test Case – *how your program run*
- Evaluation

# Other Milestones / Deadlines

---

- Nov 17: Quiz 3
  - Programming quiz; Use class time to review material
- Nov 22: Research paper presentation (2 mins)
  - Add paper title and venue (column M) – has to be a research or application paper in last two years (2020-2022) at a top AI/NLP/Image/Audio conference: ACL, AACL, IJCAI, NeurIPS, CIKM, CVPR, ICML, WWW.
  - Prepare 1-slide summary containing the following and present in 2 mins in class
    - **Summary:** problem, solution, related work, evaluation, contributions
    - **Opinion:** What you liked or did not like

# Main Lecture

---

# NLP Task – Stateful Interaction

---

The system itself can do any task:

- Question / answering
- Information retrieval
- Chitchat
- ...

# Chatbots - Background

---

- Conversation agents and interfaces (chatbots) are getting easy to build and deploy
  - Can be text-based or speech-based
  - Usually multi-modal (i.e, involving text, speech, vision, document, maps)
- Current chatbots typically interact with a single user at a time and conduct
  - Informal conversation, or
  - Task-oriented activities like answer a user's questions or provide recommendations

## **Demonstrations**

- *Eliza*, <http://www.manifestation.com/neurotoys/eliza.php3>
- *Mitsuku*, <https://www.pandorabots.com/mitsuku/>

# Current State

---

- Handle uncertainties related to
  - Natural language
  - Human behavior
- Dialog Management
  - Reasoning on data's abstract representations (Inouye 2004)
  - Learning policies over predictable nature of data (Young et al. 2013)
  - Statistical machine learning for dialog management: its history (Crook 2018)
- Hype around potential
- User feedback is mixed
  - Novelty value for chit-chat but concerns about usability (e.g., Tay)
  - Deployed for customer support commonly but usage is often low (compared to other channels), capability is limited (usually single turn), and not considered the preferred channel of choice for most users

# Chatbots in Dynamic Environment

---

- Data changes, e.g. sensor data
- Groups of people, who come and go in environment
- Multi-modal interfaces, i.e., modes beyond conversation, like map, graphics and documents
- Dialog Management
  - Combination of learning and reasoning

S.No.	Dimension	Variety
1	User	1, multiple
2	Modality	only conversation, only speech, multi-modal (with point, map, ...)
3	Data source	none, static, dynamic
4	Personalized	no, yes
5	Form	virtual agent, physical device, robot
6	Purpose	socialize, goal: information seeker, goal: action delegate
7	Domains	general, health, water, traffic, ...

# Current Practice of Water Advice

Advisories to public for Flint Residents, MI, USA

Physical signage at a lake in Washington, USA

## Decision-Support in Water: Problem and Objective

Guide every day people, who may be non-experts, with a multi-modal assistant to take data-based decisions specific to their needs, leveraging complex water quality data.

### Audience

- General Public that wants to understand water quality at a specific location (e.g., swimming)
- Professionals with responsibility for regions (e.g., public health)

### Before and After

**Now:** Static, non-interactive, non-contextual, lacks data details

**Future:** Anywhere, interactive, explain with data, contextual

# Demo: Water Advisor

---

<https://www.youtube.com/watch?v=z4x44sxC3zA>

Jason Ellis, Biplav Srivastava, Rachel K. E. Bellamy, Andy Aaron, [Water Advisor – A Data-Driven, Multi-Modal, Contextual Assistant to Help with Water Usage Decisions](#), at Proc. 32nd AAAI Conference on Artificial Intelligence (AAAI-18), New Orleans, Louisiana, USA, Feb 2-7, 2018. **[Demonstration, Water]**.

# AI Technical Issues in Collaborative Assistants for Water

Dimensions	General	Water Specific
<b>Learning</b>	Off-the-shelf trained intents	Water quality trends
<b>Representation</b>	Representation of raw data	Activity purpose and related parameters, water safety limits
<b>Reasoning</b>	Rule-based handling of missing values	Location and activity based regulation selection, interpreting safe limits for a parameter
<b>Execution</b>	Controlling interaction modules, asking questioning and parsing responses	Generating error rates, system confidence and usability rules
<b>Human Usability Factors</b>	Using error rates of conversation modules to control questioning strategy	Using missing data to control water advice in generated natural output.
<b>Ethical Issues</b>	Biases, adversarial examples, privacy violations, safety challenges and reproducibility concerns	Preference encoded in rules based on activities: recreation over drinking

# Potential of Conversation Agents in Helping People

---

# Characteristics and Potential

---

- Chatbots
  - Support a natural mode of interaction
  - Create a visible presence for an organization providing AI technology to users
  - Provide a sequential, slow mode of interaction (compared to the parallel, visual mode)
- Areas where people want help
  - Retrieve information
    - Contextual, user-specific, data access
    - Making data accessible to people with disability
  - Decision making: Helping choose among complex alternatives
  - Collaboration and mediation: among people making complex decisions

# Everyday Scenarios - People

---

- Travel: “Which train can I take to office?”
  - Needs information about locations, train schedules and status, personal schedule
  - Category: information seeking
- Health: “Who can I see now for my pain in the stomach?”
  - Needs information about location, likely medical situation, medical specialties, doctors and health care providers in the vicinity, insurance and payment situation, availability of services
  - Category: information seeking, choosing among alternatives
- Social: “How do I meet my visiting friend with family at an evening?”
  - Needs information about schedule of friend’s family and mine, location of home and friend’s stay, capacity of home and restaurants in the area
  - Category: information seeking, choosing among alternatives, collaboration

# Everyday Scenarios - Business

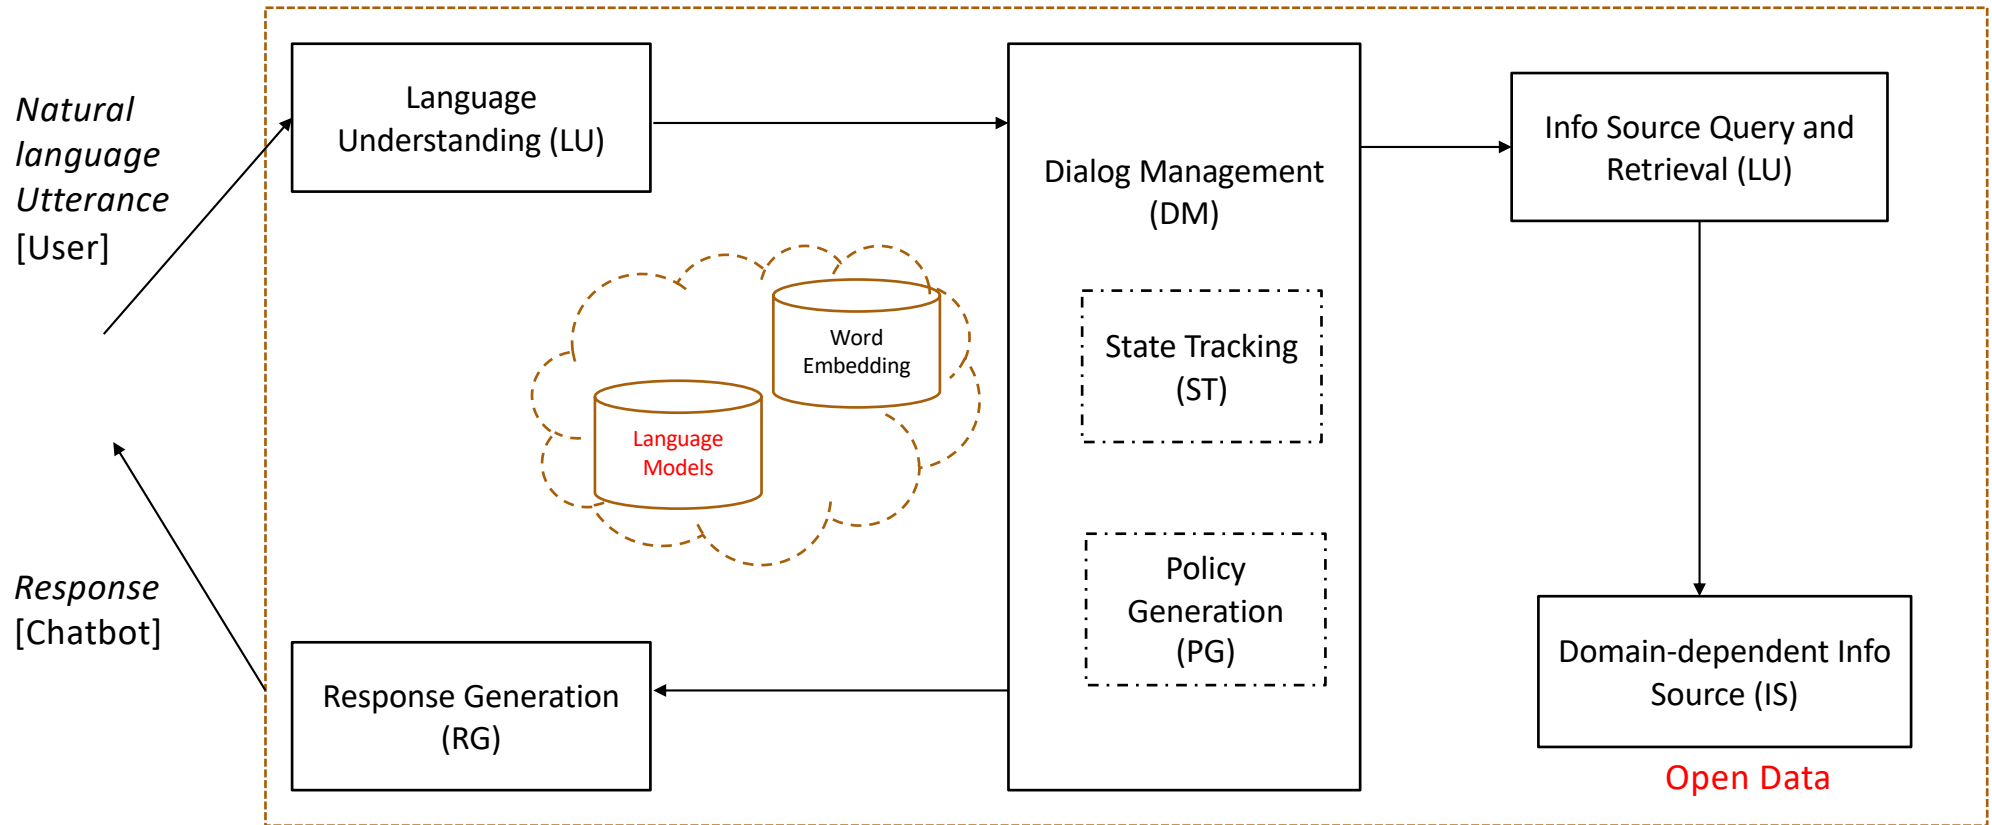

---

- Guidance
  - During data science
    - Rogers Jeffrey Leo John, Navneet Potti, Jignesh M. Patel, Ava: From Data to Insights Through Conversations. CIDR 2017
  - Skilling and professional development
- Collaboration and Mediation Decisions
  - Hiring a candidate
  - Scheduling an activity, e.g., medical operation
  - Merger and Acquisitions

# Building a Chatbot

- MindMeld - <https://www.mindmeld.com/>

# Type of Methods for Policy Generation

---

- Finite-state
- Frame-based
- Response-generation (including learning)
- Inference based (including planning)

# Finite State DM / PG

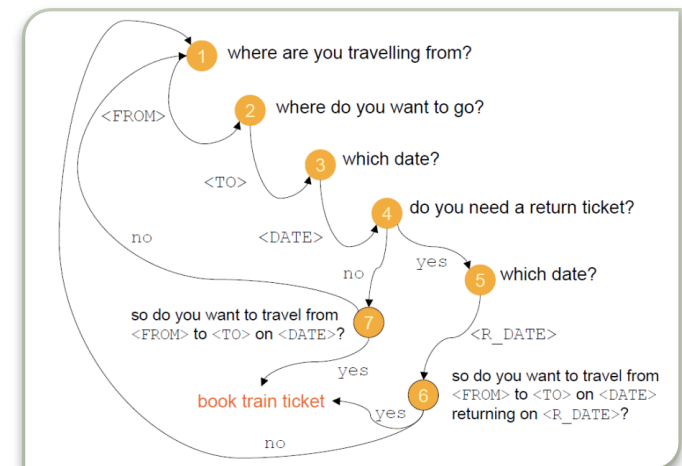

- Nodes both represent dialogue states and have associated output prompts by the system.
- Arcs represent expected user input. They lead to state transition.

**Credit:** Paul Crook's invited talk at AAAI DeepDial 2018 workshop

# Finite State DM / PG

- The policy is a **program** at each node that the system executes if triggering conditions are met
- The set of possible paths in the flow diagram define the set of legal dialogues.
- The system has control over the conversation at all times.
- The user is assumed to be cooperative
  - Unexpected responses or extra information is usually ignored
  - System focused on the immediate / last user prompt.

**Credit:** Adapted from Paul Crook's invited talk at AAAI DeepDial 2018 workshop

# Frame-Based DM/ PG

- A **declarative**, data-driven approach
- Frames consist of slots (variables), values and (system) prompts
  - Can be extended to capture ASR/NLU confidence scores, and grounding between the user and the agent
- A control algorithm determines what to say next based on the frame contents.
- The control specification can be as simple as *collect the first slot that has an unknown value*.
- Slots can be filled/refilled in any order and user responses can fill more than one slot.
  - Assumes an ASR and NLU models capable of interpreting multi-slot and out-of-expected-turn utterances.

**Credit:** Adapted from Paul Crook's invited talk at AAAI DeepDial 2018 workshop

Example Frame

slot	value	prompt
ORIGIN	unknown	From which city are you leaving?
DESTINATION	unknown	Where are you travelling to?
DATE	unknown	When do you want to travel?

# Frame-Based DM/ PG

Assuming the frame contains all the information required for the control algorithm to act optimally, the control task maps onto a Markov Decision Process (MDP).

slot	value	prompt
ORIGIN	unknown	From which city are you leaving?
DESTINATION	unknown	Where are you travelling to?
DATE	unknown	When do you want to travel?

A MDP is defined as a tuple  $\langle S, A, T, R \rangle$ .  
Established approaches exist for learning optimal policies.

**Credit:** Adapted from Paul Crook's invited talk at AAAI DeepDial 2018 workshop

# Reinforcement Learning for DM

---

Given a MDP, techniques such as Reinforcement Learning (RL) can be applied to optimize the policy through trial and error.

RL framework:

Needs:

- Dialog data for training
- Variation: Partially observable MDP

**Credit:** Adapted from Paul Crook's invited talk at AAAI DeepDial 2018 workshop

# Comparing Approaches

## Finite-State DM

### Procedural

#### Advantages:

- Easy to understand; many designers and developers familiar with procedural approaches
- Precise control of dialogue paths allows:
  - easy constraint of the dialogue when required (e.g. account payment processing)
  - risk adverse designs/simplified ASR & NLU
  - easier scripting of intelligent sounding prompts; e.g. accounting for pragmatics

#### Disadvantages:

- Ridged dialogues can frustrate users
- Flow-diagrams quickly become complex

## Frame-Based/IS DM

### Typically Declarative

#### Advantages:

- Easy to author slot filling dialogs
- Allows for flexible, user directed and mixed initiative dialogues

#### Disadvantages:

- Scripting good system prompts is more challenging – need sophisticated NLG to avoid sounding robotic or repetitious (and to encode pragmatics)
- Imposing constraints on the dialogue paths can be complicated, e.g. developers less comfortable with declarative programming

# Response Generation DM/ PG

- Response-Generation approaches collapse the user understanding to generation process by learning a direct input to output function

- They are appealing in that they
  - eliminate the manual design of internal ML features (especially Seq-2-Seq models),
  - are end-to-end trainable from unannotated NL “query-response” pairs,
  - have been shown to generate surprising engaging dialogues,
  - can capture human conversational norms like politeness, etc.

**Credit:** Adapted from Paul Crook’s invited talk at AAAI DeepDial 2018 workshop

# Response Generation Methods

- Information Retrieval / ranking query-response pairs.

- [Filter, rank, and transfer the knowledge: Learning to chat. S. Jafarpour et al., NIPS, 2009]
- [NPCEditor: Creating virtual human dialogue using information retrieval techniques. A. Leuski and D. Traum, AI Magazine 2011]

- Phrase-based Machine Translation.

- [Data-driven response generation in social media. A. Ritter et al., EMNLP, 2011]

- Seq-2-Seq models.

- [Neural responding machine for short-text conversation. L. Shang et al., ACL, 2015]
- [A neural conversational model. O. Vinyals and Q. Le, ICML Deep Learning Workshop, 2015]
- [A neural network approach to context-sensitive generation of conversational responses. A. Sordoni et al., NAACL HLT, 2015]

**Credit:** Adapted from Paul Crook's invited talk at AAAI DeepDial 2018 workshop

# Inference-Based DM/PG

---

- Inference-Based DM considers dialogue as a planning task.
- The DM has a set of goals and axioms and is equipped with plan-based reasoner, e.g. a theorem prover.
- Dialogue acts are instances of goal-orientated *action schema*; typically specified in terms of constraints, preconditions, goals and effects, e.g.

**BOOK**( $S, U, T$ )

Constraints:  $System(S) \wedge User(U) \wedge Ticket(T)$

Goal:  $Booked(S, U, T)$

Preconditions:  $Knows(S, Origin(T)) \wedge Knows(S, Dest(T)) \wedge \dots$

Effects:  $Booked(S, U, T)$

**INFO\_REQUEST**( $A, B, P$ )

Constraints:  $Speaker(A) \wedge Addressee(B) \wedge Prop(P)$

Goal:  $Know(A, P)$

Preconditions:  $\neg Know(A, P) \wedge Desire(A, Know(A, P) \wedge Believe(A, Know(B, P))) \wedge \dots$

Effects:  $Believe(B, Desires(A, Know(A, P)))$

**Credit:** Adapted from Paul Crook's invited talk at AAIL  
DeepDial 2018 workshop

# Reasoning Illustration - Planning Example

## TDEBot

TDEBot, 3:29 PM

Train Number 12312 will be delayed by 278.0 minutes at HWH station on 2018-10-18

TDEBot, 3:29 PM

The bottleneck station is FTP causing delay of 90.2 minutes on 2018-10-18

TDEBot, 3:32 PM

Sorry, I didn't understand! Please Try again

TDEBot, 3:33 PM

Train 12312 will not be mitigated any more after station ALD on 2018-10-18. It will arrive even later by 52.0 minutes

is train 12312 on time today?

3:29 PM

Where is the bottleneck?

3:32 PM

What is FTP?

3:32 PM

What is the delay at Allahabad?

# Lecture 23: Concluding Comments

---

- Different types of chatbots
- Potential for using them
- Different ways of building them
  - Rule based methods
  - (Deep) learning based methods
- Applications
- Ethical Issues

# About Next Lecture – Lecture 24

---

# Lecture 24 Outline

---

- Ethical Issues with computer processing of natural languages
- Stateless services – translators, sentiment, ...
- Stateful services – chatbots
- Mitigation methods
