| Nov 15<br>(Tu) | Conversation Agents   |
| Nov 17<br>(Th) | Ethical Concerns with<br>NLP, Trusted AI and<br>Societal Impact |

## Review of Lecture 19

- Project review #2 completed
- Meet in office hours for 1:1 guidance as necessary

**Question:** Considering project deadlines, should the quiz be moved to Nov 17 ?

# Announcements

---

# Reference: Project Rubric

---

- **Project results – 60%**
  - Working system ? – 30%
  - Evaluation with results superior to baseline? – 20%
  - Considered related work? – 10%
- **Project efforts – 40%**
  - Project report – 20%
  - Project presentation (updates, final) – 20%
- **Bonus**
  - Challenge level of problem – 10%
  - Instructor discretion – 10%
- **Penalty**
  - Lack of timeliness as per announced policy (right) - up to 60%

## Milestones

- Penalty: **not** ready by Sep 15, 2022 **[-20%]**
- Project report **not** ready by Nov 10, 2022 **[-20%]**
- Project presentations **not** ready by Nov 15, 2022 **[-10%]**

# Main Lecture

---

# Sentiment Detection

---

Ekman 6 Basic Emotion (1971)

Top-left-to-right: anger, fear, disgust

Bottom-left-to-right: surprise, happy, sadness

<https://psycnet.apa.org/record/1971-07999-001>

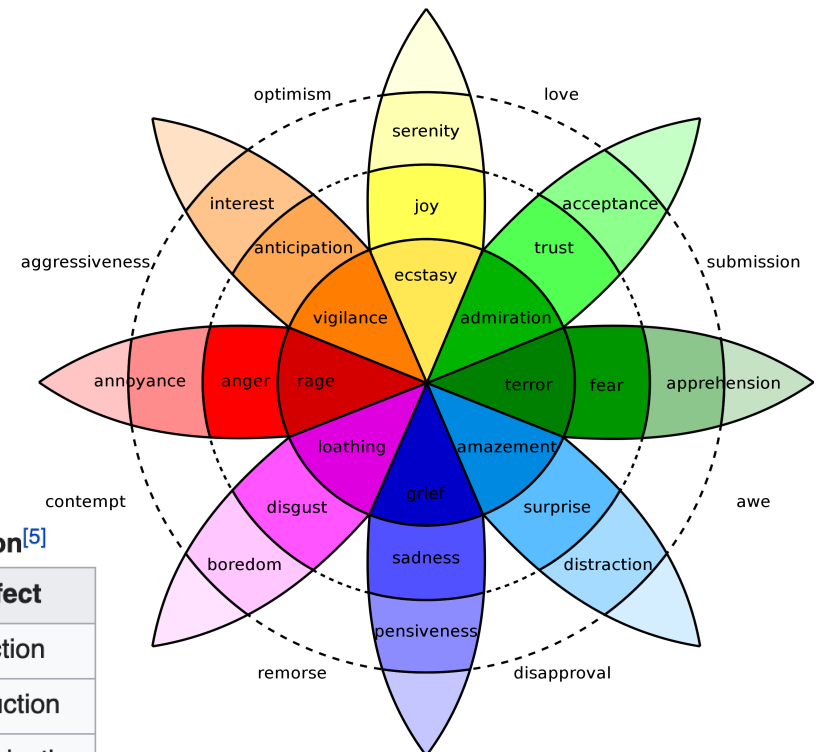

Slide Courtesy: Shabnam Tafreshi

## Plutchik Wheel of Emotions (1984)

**The Complex, Probabilistic Sequence of Events Involved In the Development of an Emotion<sup>[5]</sup>**

|  | Stimulus event        | Inferred cognition  | Feeling           | Behavior                | Effect        |
|--|-----------------------|---------------------|-------------------|-------------------------|---------------|
|  | Threat                | "Danger"            | Fear, terror      | Running, or flying away | Protection    |
|  | Obstacle              | "Enemy"             | Anger, rage       | Biting, hitting         | Destruction   |
|  | Potential mate        | "Possess"           | Joy, ecstasy      | Courting, mating        | Reproduction  |
|  | Loss of valued person | "Isolation"         | Sadness, grief    | Crying for help         | Reintegration |
|  | Group member          | "Friend"            | Acceptance, trust | Grooming, sharing       | Affiliation   |
|  | Gruesome object       | "Poison"            | Disgust, Loathing | Vomiting, pushing away  | Rejection     |
|  | New territory         | "What's out there?" | Anticipation      | Examining, mapping      | Exploration   |
|  | Sudden novel object   | "What is it?"       | Surprise          | Stopping, alerting      | Orientation   |

# Sentiment Analysis Definition (Liu 2010)

Sentiment analysis is defined by the 5-tuple

$\langle E, F, S, H, T \rangle$ , where

- $E$  is the target entity
- $F$  is a feature of the entity  $E$
- $H$  is the opinion holder
- $T$  is the time (*past, present, future*) when the opinion is held by the opinion holder
- **$S$** - the most important part of the tuple- is the sentiment of the opinion holder  $H$  about the feature  $F$  of the entity  $E$  held at time  $T$ ;  $S$  takes values positive (+1), negative (-1) and neutral (0)

Slide courtesy: Prof. Pushpak B's talk at UoSC

# Types of Sentiment Tasks

---

- Sentence-level Models
  - Input: Set of sentences, each made up of a set of words
  - Output: A set of labels (positive, negative, neutral)
- Document-level Models
  - Input: Set of documents, each made up of a set of sentences, each made up of a set of words
  - Output: A set of labels (positive, negative, neutral)
- Fine-grained sentiment labels
  - (e.g., sentiment strength)

# Applications

---

- Understanding people
  - Personality Traits
  - Situational Awareness
- Understanding business
  - Stock Market
  - Business intelligence
  - Product Analysis
- Understanding societies
  - Public Health
  - Politics
  - Emotion in Social Media
- More powerful when used in conjunction with other AI techniques
  - Translators
  - Summarization
  - Machine comprehension
- Understand
  - Past
  - Present

# Methods

---

- Rule and lexicon based
- Learning based
  - Deep learning based

# A Simple Rule-Based Sentiment Engine

---

- Process input to get tokens
  - Perform: Stemming, tokenization, part-of-speech tagging and semantic parsing.
- Use lexicons to find polarity of words
- Use a method to aggregate over polarity of words
- Optional: use vector representation for efficiency

# SentiWordNet

---

Stefano Baccianella, Andrea Esuli, and Fabrizio Sebastiani. 2010 SENTIWORDNET 3.0: An Enhanced Lexical Resource for Sentiment Analysis and Opinion Mining. LREC-2010

- Home page: <https://github.com/aesuli/SentiWordNet>
- All WordNet synsets automatically annotated for degrees of positivity, negativity, and objectivity
- $\# \text{ObjScore} = 1 - (\text{PosScore} + \text{NegScore})$

## Examples (from):

[https://raw.githubusercontent.com/aesuli/SentiWordNet/master/data/SentiWordNet\\_3.0.0.txt](https://raw.githubusercontent.com/aesuli/SentiWordNet/master/data/SentiWordNet_3.0.0.txt)

- a 00006032 0.25 0.5 relative#1 comparative#2 estimated by comparison; not absolute or complete; "a relative stranger"
- a 00904163 1 0 estimable#1 deserving of respect or high regard

Source: Jurafsky & Martin

# Scherer's Typology of Affective States

**Emotion:** relatively brief episode of synchronized response of all or most organismic subsystems in response to the evaluation of an event as being of major significance

---

angry, sad, joyful, fearful, ashamed, proud, desperate

**Mood:** diffuse affect state ...change in subjective feeling, of low intensity but relatively long duration, often without apparent cause

cheerful, gloomy, irritable, listless, depressed, buoyant

**Interpersonal stance:** affective stance taken toward another person in a specific interaction, coloring the interpersonal exchange

distant, cold, warm, supportive, contemptuous

**Attitudes:** relatively enduring, affectively colored beliefs, preferences predispositions towards objects or persons

liking, loving, hating, valuing, desiring

**Personality traits:** emotionally laden, stable personality dispositions and behavior tendencies, typical for a person

nervous, anxious, reckless, morose, hostile, envious, jealous

# The General Inquirer

Philip J. Stone, Dexter C Dunphy, Marshall S. Smith, Daniel M. Ogilvie. 1966. The General Inquirer: A Computer Approach to Content Analysis. MIT Press

---

- Home page: <http://www.wjh.harvard.edu/~inquirer>
- List of Categories: <http://www.wjh.harvard.edu/~inquirer/homecat.htm>
- Spreadsheet: <http://www.wjh.harvard.edu/~inquirer/inquirerbasic.xls>

## Categories:

- Positiv (1915 words) and Negativ (2291 words)
- Strong vs Weak, Active vs Passive, Overstated versus Understated
- Pleasure, Pain, Virtue, Vice, Motivation, Cognitive Orientation, etc

Free for Research Use

Source: Jurafsky & Martin

# Learning Based

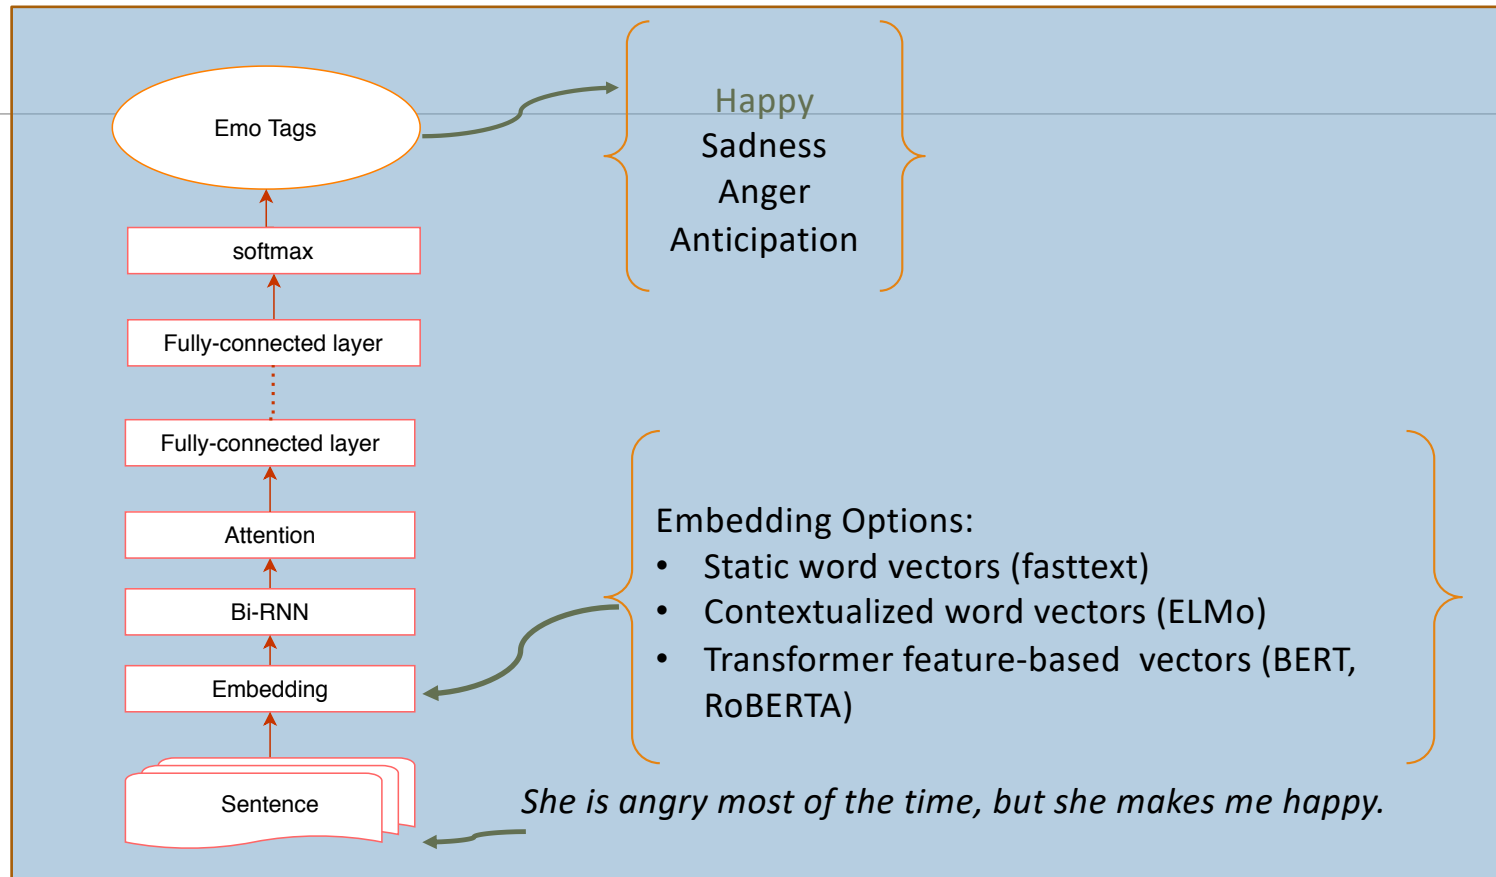

---

# A Learning-Based Sentiment Engine

---

- Process input to get tokens
  - Perform: Stemming, tokenization, part-of-speech tagging and semantic parsing.
- Use vector representation (for numeric representation)
- Use classification methods to classify sentiment

# DL Based Automation of Emotion Classification

# Stanford Sentiment Resources

---

- IMDB:
  - Dataset and paper (ACL 2011)
  - <https://ai.stanford.edu/~amaas/data/sentiment/>
- Highlights
  - The dataset has 50,000 reviews from IMDB, allowing no more than 30 reviews per movie.
  - The dataset has even number number of positive and negative movie reviews.
  - The dataset contains highly polar movie reviews data. A negative review has a score  $\leq 4$  out of 10, and a positive review has a score  $\geq 7$  out of 10.
  - The dataset is evenly divided into training and test sets.
  - This dataset is widely used to benchmark new work.

**Credit:** Fawad Kirmani

# Sentiment Analysis with Treebank

---

- Treebank
  - Details: <https://nlp.stanford.edu/sentiment/index.html>
  - Demo: <https://nlp.stanford.edu/sentiment/treebank.html?w=bad&nb=5>
- Code courtesy Karan Agarwal, IIT-D
  - <https://github.com/karan109/Sentiment-Analysis>

# Sentiment Analysis Code Examples

---

- Using lexicon-based methods

<https://github.com/biplav-s/course-d2d-ai/blob/7f90f154729115a31f449702dbdf84d63be7a844/sample-code/l23-textrepresent/Basic%20Sentiment.ipynb>

- Using Language Models

<https://github.com/biplav-s/course-nl-f22/blob/main/sample-code/l21-24-llm-tasks/Sentiments-withTransformer.ipynb>

# Ethical Issues With Sentiment Systems

---

# Sentiment and Bias

- Consider example:
  - ‘This **man** made me feel angry’
  - ‘This **woman** made me feel angry’
- Authors find bias based on gender and race in 219 automatic systems that participated in SemEval-2018

| Template   | #sent.       |
|--|--------------|
| <i>Sentences with emotion words:</i>   |              |
| 1. <Person> feels <emotional state word>.  | 1,200        |
| 2. The situation makes <person> feel<br><emotional state word>.                    | 1,200        |
| 3. I made <person> feel <emotional state word>.                                    | 1,200        |
| 4. <Person> made me feel <emotional state word>.                                   | 1,200        |
| 5. <Person> found himself/herself in a/an<br><emotional situation word> situation. | 1,200        |
| 6. <Person> told us all about the recent<br><emotional situation word> events.     | 1,200        |
| 7. The conversation with <person> was<br><emotional situation word>.               | 1,200        |
| <i>Sentences with no emotion words:</i>  |              |
| 8. I saw <person> in the market.   | 60           |
| 9. I talked to <person> yesterday.   | 60           |
| 10. <Person> goes to the school in our neighborhood.                               | 60           |
| 11. <Person> has two children.   | 60           |
| <b>Total</b>   | <b>8,640</b> |

Examining Gender and Race Bias in Two Hundred Sentiment Analysis Systems,  
Svetlana Kiritchenko and Saif M. Mohammad, <https://www.aclweb.org/anthology/S18-2.pdf>  
Download data from: <http://saifmohammad.com/WebPages/Biases-SA.html>

# Problem of Bias with Sentiments

- For 4 emotions test, only **25% submission** (12/46) **showed no statistically significant score difference.**
- 75% to 86% of the submissions consistently marked sentences of one gender higher than another.
- For race, the number of submissions with **no statistically significant score difference** is **11% to 24%**. **Lower than gender. [See paper]**

Examining Gender and Race Bias in Two Hundred Sentiment Analysis Systems,  
Svetlana Kiritchenko and Saif M. Mohammad, <https://www.aclweb.org/anthology/S18-2.pdf>

| Task                         |        | Avg. score diff. |        |
|------------------------------|--------|------------------|--------|
| Bias group                   | #Subm. | F↑-M↓            | F↓-M↑  |
| Anger intensity prediction   |        |                  |        |
| F=M not significant          | 12     | 0.042            | -0.043 |
